Projects

TradeSim - Real-Time Stock Market Simulator | *React, Node.js, MongoDB* *Jan 2026 – Present*

- Built a comprehensive trading simulation platform enabling users to practise stock and crypto trading with virtual currency using live market data.
- Developed a dynamic frontend using **React (Vite)** and **Recharts/Lightweight Charts** for real-time interactive financial charting and portfolio tracking.
- Engineered a robust backend with **Node.js** and **Express** to integrate external APIs (Finnhub, CoinGecko) for up-to-the-minute asset pricing.
- Implemented secure **JWT authentication** and a **MongoDB** database to manage user profiles, wallet balances, and transaction history reliably.

AI-Powered Recruitment Automation Platform | *Python, FastAPI, React* *Sep 2025 – Present*

- Built AI-driven resume parsing using **PyMuPDF** and **python-docx** to extract candidate details and generate structured profiles.
- Integrated **LangChain** and **OpenAI** for sentiment analysis and automated job description generation; utilized Jaccard similarity for scoring.
- Developed a full-stack dashboard using **React**, **TailwindCSS**, and **FastAPI** for bulk resume uploads, candidate ranking, and analytics.
- Automated interview scheduling via **Google Calendar API** with real-time slot validation and email notifications.

Achievements
